Centennia Historical Atlas Access Code.Q: How to get an ArrayList to print the objects stored So I made a method, which fills an ArrayList with objects of the class Thing. This class is a subclass of the class Pet. So there is an attribute, which stores the kind of the pet, i.e. Dog or Cat. With my method I fill a list of the class Thing. What I want now, is to print out the list and each thing of the list. I am trying to figure this out but could not. Here is what I did so far: I created a method to print out the list of all Things: public static void printList(){ ArrayList list = new ArrayList (); list.add(new Thing("Dog", "4")); list.add(new Thing("Cat", "3")); System.out.println(list); } And a method to convert the List of all Things to an ArrayList of the class Thing: public static ArrayList makeArrayList(){ ArrayList list = new ArrayList(); return list; } And the main class: public class Main { public static void main(String[] args) { f678ea9f9e
